DETAILED ACTION

This Office Action is in response to applicant's communication on 10/4/2006.

Currently elected claims 1-9 are pending and stand rejected below.

Election/Restrictions

Applicant's election without traverse of claims 1-9 in the reply filed on 10/4/2006 is acknowledged.

Claims 10-13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected apparatus, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/4/2006.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wariar et al. (U.S. Patent Number 7,138,088). Wariar discloses and teaches a method for a direct contact measurement to detect access disconnection such as dislodgement of an access device from the patient through which fluid can flow during medication delivery therapy. Further Wariar teaches a method of delivering a drug into a patients

Art Unit: 3767

body through a patient's skin (as in figure 1C) with an injection device (device from 68,64,66,70, to 56), forming an electrical circuit between the patients body and the injection device (as shown in figure 1c and arrow), providing an electric impedance monitor (such as element at 74) and measuring the electrical impedance between the patients body and the injection device, delivering the drug (fig. 1c), and detecting the change in impedance during the delivery of the drug into the patients body (specifically see Wariar paragraphs at column 10-12), further causing a audible and/or visual signal that indicates the change in the electric circuit impedance (see column 17 line 22).

Wariar discloses the claimed invention except for using a jet injection device as an injection device. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a jet injection device as an injection device since it was known in the art that providing an injection by a jet form is one type hypodermic injection. It is examiners position that it would be implicit in Wariar that a jet type of injection is encompassed in the term access device or injection device and if not implicit an obvious variation thereof. It would be obvious to modify the injection device, (in the fig 1c a needle) with a jet injector since this would provide an alternate equivalent mode of delivering fluid to a patient.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phillip Gray whose telephone number is (571) 272-7180. The examiner can normally be reached on Monday through Friday, 8:30 a.m. to 4:30 p.m. EST.

Application/Control Number: 10/796,468

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Sirmons can be reached on (571) 272-4965. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
